A. Quail M., Rutherford K., Simmonds M., Skelton J., Stevens K.,
A. Complete genome sequence of a multiple drug resistant Salmonella
T. — enterica serovar Typhi CT18.",
T. — enterica serovar Typhi CT18.",
T. — hature 413:848-852(2001).
T. — FUNCTION: TARSPER OF ELECTRONS FROM NADH TO THE RESPIRATORY
CHAIN. THE IMMEDIATE ELECTRON ACCEPTOR FOR THE ENZYME IS BELIEVED
TO BE UBIQUINONE. DOES COUPLE THE REDOX REACTION TO PROTON
TO BE UBIQUINONE AND THUS CONSERVES THE REDOX ENERGY IN A PROTON
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                   -!- CATALYTIC ACTIVITY: NADH + ubiquinone = NAD(+) + ubiquinol.
-!- COFACTOR: BINDS 1 2FE-2S CLUSTER AND 1 4FE-4S CLUSTER (POCENCI.)
-!- SUBUNIT: COMPOSED OF 13 DIFFERENT SUBUNITS. SUBUNITS NUOCD, E,
-!- SIMILARITY: BELONGS TO THE PERIPHERAL SECTOR OF THE COMPLEX.
-!- SIMILARITY: BELONGS TO THE COMPLEX. 1 75 kDa SUBUNIT FAMILY.
-!- CAUTION: REF. 3 SEQUENCE DIFFERS FROM THAT SHOWN DUE TO FRAMESHIFTS IN POSITIONS 714 AND 805.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

TELECTE BLEATHS OF LABBILING BLAND CHARLOWS: THE CARBOXYLATION OF D-Plante 2008:365-372 (1999)

C. -- FUNCTION: RUBISCO CATALYZES TWO REACTIONS: THE CARBOXYLATION OF D-RIBUGOSE 1,5-BISHOSPHATE, THE PRIMARY EVENT IN PHOTOSYNTHETIC CARBON DIOXIDE FIXATION, AS WELL AS THE OXIDATIVE FRAGMENTATION OF THE PENTOSE SUBSTRATE IN THE PHOTORESPHATION PROCESS. BOTH REACTIONS OCCUR SIMULTANEOUSLY AND IN COMPETITION AT THE SAME ACTIVE SITE (BY SIMILARITY).

C. -- CATALYTIC ACTIVITY: D-RIBULOSE 1,5-BISPHOSPHATE + O(2) = 3 - PHOSPHO-D-CLYCERATE + 2-PHOSPHOGLYCOLATE.

C. -- CATALYTIC ACTIVITY: D-RIBULOSE 1,5-BISPHOSPHATE + CO(2) = 2 3 - PHOSPHO-D-CLYCERATE + 2-PHOSPHOGLYCOLATE.

C. -- CATALYTIC ACTIVITY: D-RIBULOSE 1,5-BISPHOSPHATE + CO(2) = 2 3 - PHOSPHO-D-CLYCERATE + 8 SMALL CHAINS (BY SIMILARITY).

C. -- SUBCELLIAR LOCATION: CHLOROPLAST (BY SIMILARITY).

C. -- SUBCELLIAR LOCATION: CHLOROPLAST (BY SIMILARITY).

C. -- SIMILARITY: BELONGS TO THE RUBISCO LARGE CHAIN FAMILY.

                                                                                                   The specification describes a fish serine proteinase. The proteinases care useful as medicaments, for treating and preventing a disease in a care useful as medicaments, for treating and preventing a disease in a compared to the protein arbititis, inflamed joints, bursatis, osteoarbritis, inflamed joints, bursatis, osteoarbritis, captic arthritis, invenie erythematosus, phlebitis, tendinitis, rash, care, eczema, facial seborrheic eczema, cacema of the hands, caceroriasis, acne, eczema, facial seborrheic eczema, escema of the hands, caceroriasis, or neck, foreskin infections, athlete's foot, fistulae infections, infections, or neck, foreskin infections in newborns, wrinkles, scars, infections in newborns, wrinkles, scars, infections in carecinom and immunological and autoimmune diseases. They are also useful for removing dead or pealing skin from otherwise healthy skin, and for treating or preventing a skin from otherwise healthy skin, and for treating or preventing a disease in which pathogenesis is caused by bacteria, virus, fungus, chalm. The present sequence represents the amino terminal of bovine trypsin B chalm.
                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Polypeptide with plasminogen activator activity useful as thrombolytic agent for treating blood clot disorders e.g. heart attack, comprises 10 amino acid peptide fragment for recognition or activation of plasminogen
                      Fish serine proteinase, useful as a cosmetic, medicament for treating eczema, psoriasis, arthritis, and in the manufacture of the medicament for treating, preventing pathogenic diseases involving receptor mediated binding
                                                                                                                                                                                                                                                                                                                                                                                Gaps

The present sequence is bowine chymotrypsinogen. It was included in a review of sequence homologies of several plasminogen activators.

C a review of sequence homologies of several plasminogen activators.

C plasminogen is the principal servine processes yengen in the control of the plasmin of the principal servine processes. Its active form, plasmin, is control of the plasminogen activators which hydrolyse a peptide bond in plasminogen to convert it to plasmin or form tight binding complexes with plasminogen to convert it to plasmin or form tight binding complexes with plasminogen to spontaneously convert it to plasmin or form tight binding complexes with plasminogen to spontaneously convert it to plasmin or form tight binding complexes to plasminogen activation. This peptide is particularly useful when inserted between amino acid residues 644 and 645 of full length human control or plasminogen activation/recognition site of plasminogen activation/recognition site of plasminogen binding proteins.

The polypeptides are useful in preparing thrombolytic agents for treating blood clotting disorders such as heart attack.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Multifunctional enzyme; treatment; acne; eczema; chymotrypain; trypsin; collagenase; elastase; exopeptidase; cell surface receptor; anti-acne; anti-achesion molecule; ICAM-1; CD4; ICAM-2; VCAM-1; CD4; ICB3; CD5; CD5; CD3; CD4; CD4; CD49; CD62; CD62; GM1 ceramide; krill; bovine.

The product of the invention have antiseborrheic, anti-acne, dermatological and anti-eczema activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Treating acne and eczema using a krill-derived multifunctional enzyme

The specification describes a method for preventing or ameliorating transplantation rejection reactions for transplantation of immune cells or other tissues. The method comprises treating a source of immune cells with a hydrolase or hydrolase mixture and administering the treated immune cells to a recipient animal. The hydrolase especially has a preference for removing, destroying, inactivating or disabling at least cone of CD4, CD8, CD25, CD29, ICD4, ICD52, OD152, an integrin, CD154, CD40 and CD80 in contrast to removing, destroying, inactivating or disabling TCR. The methods are useful for preventing graft versus host consistent of assabling at least to remove the cell surface adhesion contrast. The methods are useful for preventing or preventing or the diseases. The methods are used for treating or preventing cell-cell or cell-virus adhesion syndrome comprising inflammation, shock, the contrast and disease, transplantation rejection contrast. The methods are used for treating or preventing cell-cell or cell-virus adhesion syndrome comprising inflammation, shock, the actions or microbial infections. The present sequence represents the contrast.
                                                                                                                                                                                                                                                                                                                                                                        ö
(1) removes or inactivates cell surface receptors (proteins and glycoproteins) and adhesion molecules such as ICAM-1 (i.e. CD54), ICAM-2, VCAM-1, CD4, CD5, CD22, CD29, CD3, CD5, CD5, CD10, CD4, CD5, CD5, CD10, CD4, CD5, CD10, CD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Transplantation rejection; hydrolase; graft versus host disease; cell surface adhesion molecule; immune reaction; inflammation; shock; tumour metastasis; autoimmune disease; Krill derived multifunctional enzyme.

The method comprises treating attacoprorally donor tissue or donor source of immune cells with a rejection ameliorating effective amount of a hydrolase enzyme. The method is useful for ameliorating, treating or preventing immune rejection reactions such as graft versus host diseases, organ or tissue transplantation rejection, autoimmune disease and associated conditions, mirrobial infection, immune disease and associated conditions, obstructive pulmonary disease (COPD), atherosclarosis, cancer, asthma, septic shock, toxic shock syndrome, conjunctivitis, reperfusion injury of bovine serine multifunctional hydrolase, used in the exemplification of the invention.

The human pancreatic cancer antiquence have cytostatic, cardiant and antiinflammatory activities, and can be used for gradecological, cardiant and antiinflammatory activities, and can be used for in gene therapy. The polymucleotide and proteins can be used for preventing, treating, or ameliorating a medical condition or in assays are for diagnosing a pathological condition or a susceptibility to one in a subject. Binding partners to the proteins and the activity of the cubject. Binding partners to the proteins and the activity of the cubject. It reat or prevent pancreatic cancer antigens can be used to detect, treat or prevent pancreatic disorders, especially cancer. Agonists and antagonists to the antigens can be used to design nucleic and hybridisation probes that can be used in chromosome mapping, linkage and diagnostic methods. The proteins can be used to generate antibodies and diagnostic methods the treat or prevent partners or proteins can be used to treat or proteins can be used to treat or prevent partners or proteins can be used to treat or prevent neural, immune system, muscular, creproductive, gastrointestinal, pulmonary, cardiovascular, represent ceproductive disorders. AAC99232 to AAC99240 and AABS4467 represent ceproaliferative disorders. AAC99232 to AAC99240 and theresont invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to human tumour antigen-derived gene 15 (TADG-15) protein and coding sequence (see AAH23601 and AAB98500).

TADG-15 is an extracellular serine protease. It was found that TADG-15 is over-expressed in ovarian tumours. TADG-15 protein or its fragments of 9-20 residues that lack TADG-15 protease activity are useful for vaccinating an individual against TADG-15, having, suspected of having or at risk of getting cancer. Furthermore, the TADG-15 gene can be used as a diagnostic or therapoutic target in cancer. The present sequence was used in a sequence homology alignment with the catalytic domain of TADG-15.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel extracellular serine protease, termed tumor antigen-derived gene
15 protein overexpressed in carcinomas and DNA encoding it, for
diagnosis, treatment, prevention of cancer, particularly breast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

The present invention relates to the isolation of novel human proteases, and the nucleic acids encoding them. The sequences of the invention are useful for treating diseases and diseases.

C cancers (e.g. breast, colon, lung), immune-related diseases and disorders (e.g. restenosis and coronary thrombosis), brain or neuronal-associated diseases, metabolic disorders (e.g. disbetes, obesity), inflammatory constructions are also diseases, metabolic disorders (e.g. rheumatoid archritis and psoriasis), central or peripheral nervous system diseases, migraines, pain, sexual dysfunction, mood disorders, attention disorders, cognition disorders, hypertension, psychotic disorders, neurological disorders, hypertension, psychotic disorders, neurological disorders, and dyskinesias.

C priphers sideses, parkinson's disease) and dyskinesias.

The nucleic acids and polypeptides are also useful for treating viral confections caused by human immunodeficiency virus (HIV), and non-viral conference in infections such as ocular disease (e.g. glaucoma) and macular characters.
                  Human, protease, cancer, immune-related disorder, cardiovascular disease, neuronal-associated disease, metabolic disorder, inflammatory disorder, nervous system disorder, sexual dysfunction, pain, mood disorder, hypertension, psychotic disorder; neurological disorder; dyskinesia, viral infection; human immunodeficiency virus, HIV, non-viral infection; ocular disease, cytostatic, enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ..

The invention relates to novel serine proteases designated BSSPS (AAB11710-B11711), and to nucleic acids encoding them (AAA61733-A61734). The invention also relates to vectors and transformants comprising BSSPS nucleic acids; transgenic animals in which the expression level of BSSPS can be varied; and an mBSSPS knockout mouse. The invention additionally components and methods of production of such antibodies, methods of BSSPS detection using the antibodies, and the antibodies, and the antibodies and medical conditions, e.g., pancreatitis. A method for detecting pancreatitis comprising measuring BSSPS concentration in the blood or cinie, and a pancreatitis diagnostic agent containing an anti-BSSPS cuting, and a pancreatitis diagnostic agent containing an anti-BSSPS cuting antibody is also disclosed. Nucleotides encoding BSSPS were initially isolated in a human brain cDNA library using degenerate PCR primers (AAA6144-A6145) based on conserved regions of serine proteases and nucleotides encoding them are useful in detecting homologues, mutants and polymorphic variants in biological conserved regions of serine proteases and signostic markers for conditions such as apparerant and sequence AAB11710 represents channed by pancreatitis and prostatic hypertrophy. Sequence AAB11710 represents channed by mutances.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  .

AAC98773 to AAC99231 encode the human pancreatic cancer associated proteins, called pancreatic cancer antigens, given in AAB54008 to proteins, called pancreatic cancer antigens have cytostatic.

AAB54466. The human pancreatic cancer antigens have cytostatic.

Chab54466. The human pancreatic cancer antigens have cytostatic.

Chab54466. The human pancreatic cancer antigens be used for carcer therapy. The polymucleotide and proteins can be used for in gene therapy. The polymucleotide and proteins can be used for cancer antigens can be identified. The pancreatic cancer antigens can be used to proteins and hand antagonists to the antigens can be used to detect, treat or prevent pancreatic disorders, especially cancer. The pancreatic cancer antigens can be used to pancreatic cancer antigens can be used to design nucleic pancreatic cancer antigen polymucleotides can be used to design nucleic and hybridisation probes that can be used in chromosome mapping, linkage and harding methods. The proteins can be used to generate antibodies which are used to purify, detect and target the polypeptides, including both in vivo and in viro diagnostic and therapoutic methods. The proteins can be used to treat or prevent neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal or reproductive, gastrointestinal, pulmonary, cardiovascular, renal or professore.

Cr prodictive, gastrointestinal, pulmonary, cardiovascular, renal or prepresent in vivo and isorders. AAC99240 and AAB54467 respecent

The invention relates to novel serine proceases designated BSSP5

(AAB1710-B1711), and to nucleic acids encoding them (AAA61733-A61734).

(AAB1710-B1711), and to nucleic acids encoding them (AAA61733-A61734).

The invention also relates to vectors and transformants comprising BSSP5

Thucleic acids; transgenic animals in which the expression level of BSSP5

can be varied; and an mBSSP5 knockout mouse. The invention additionally

encompasses anti-BSSP5 antibodies and methods of production of such

antibodies, methods of BSSP5 detection using the antibodies, and the

use of BSSP5 proteins or fragments as diagnostic markers for certain

medical conditions, e.g., pancreatings a diagnostic markers for certain

medical conditions, e.g., pancreating BSSP5 concentration in the blood or

pancreatitis comprising measuring BSSP5 concentration in the blood or

contine, and a pancreatitis diagnostic agent containing an anti-BSSP5

urine, and a buman brain cDNA library using degenerate PCR primers

isolated in a human brain cDNA library using degenerate PCR primers

ESSP5 serine proteases and nucleotides encoding them are useful in

                                                                                                                                                                                                                                                            AAW02588 is the N-terminal portion of a factor derived from pig pancreatic tissue. The factor was designated PX. PX inhibits the action of osteoclasts and stimulates the action of osteochlasts, hence PX inhibits bone resorption and stimulates bone formation. The mew factor also stimulates the proliferation of human MG-63 osteochast-like cells). The factor is useful for treating bone class of oute to osteochorosis or Paget's disease. The factor may also be used to hasten bone fracture repair. Antibodies osteoblastic of PX can be used to treat osteopetrosis and such bodies.
                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

The factor has a molecular weight of 30000 measured by SDS-PAGE and causes a decrease in serum levels of candium in mice in a dose dependent manner. The factor may be used for the prevention and treatment of various bone diseases such as osteoporosis, primary and continuous hyperthyroidism and hypercalcaemia accompanying malignant tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Serum calcium lowering factor obtd. from rat pancreas - useful as drug for treatment of various bone disease e.g. osteoporosis, hyperthyroidism and hypercalcaemia.

Maximum DB seq length: 0
```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

ecrime proteinase (EC 3.4.21..) - bovine (fragment)
NyAlternate names: trypsin-like proteinase bPTLP
NyAlternate names: trypsin-like proteinase bPTLP
C;Species: Bos prinigenius taurus (cattle)
C;Species: 28-Oct-1994 #sequence_revision 28-Oct-1994 #text_change 22-Apr-1995
C;Accession: PU0036; PU0039
C;Accession: PU0036; PU0039
C;Accession: A; Batylama, K; Bdazawa, K; Nagata, K; Sasaki, Y; Nagamune, H; Matsuda, Y submitted to JPRID, September 1994
A;Description: Purification and characterization of a novel serine proteinase from bovine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pancreatic elastase (EC 3.4.21.36) IIIA precursor - human pancreatic elastase (EC 3.4.21.36) IIIA precursor - human N.Alternate names: protease E C; Species: Homo sapiens (man) C; Date: 15-Dec-1988 #sequence_revision 15-Dec-1988 #text_change_20-Jun-2000 C; Accession: A29344, JX0045 R; Ax Tani, T.; Ohsumi, J.; Mita, K.; Takiguchi, Y. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description

-! FUNCTION: ACTS UPON ELASTIN.
-!- CATALYTIC ACTIVITY: Preferential cleavage: Leu-|-Xaa, Met-|-Xaa and Phe-|-Xaa. Hydrolyzes elastin.
-!- SUBCELLULLAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: PROKREAS.
-!- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S1. ELASTASE SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDINE-82182967; PubMed-6918221; MODONAIA R.J., Swain W., Pictet R.L., MODONAIA R.J., Swift G.H., Quinto C., Swain W., Pictet R.L., Nikovits W., Rutter W.J.; "Primary structure of two distinct rat pancreatic preproelastases determined by sequence analysis of the complete cloned messenger ribonucleic acid sequences."; Elochemistry 21:1453-1463(1982).

CYTOPLASMIC (POTENTIAL).
SIGNAL-ANCHOR (TYPE-11 MEMBRANE PROTEIN)
                                                                                                                                                   human tissues.";
J. Pathol. 193:134-140(2001).

1- SUBCELLULAR LOCATION: TYPE II MEMBRANE PROTEIN. ACTIVATED BY CLEAVAGE AND SECRETED.

1- TISSUE SPECIFICITY: EXPRESSED STRONGLY IN SMALL INTESTINE. ALSO EXPRESSED IN PROSTATE, COLON, STOWACH, AND SALIVARY GLAND.

1- SIMILARITY: BELONGS TO PEPTIDASE FAMILY SI.

1- SIMILARITY: CONTAINS I SRCR DOMAIN.

1- SIMILARITY: CONTAINS I LDL-RECEPTOR CLASS A DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TRANSMEMBRANE PROTEASE, SERINE 2, NON-
